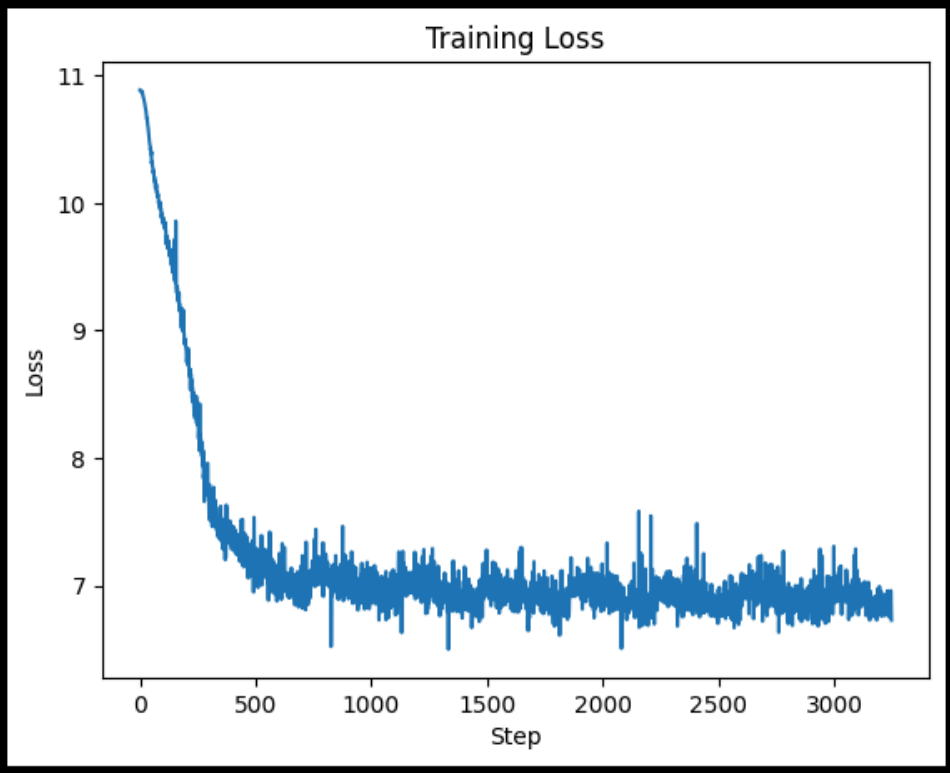
Cc: Praveen Kumar <praveen@blubridge.com>, Kripa Shankar <kripa@blubridge.com>, Adhitya Charan <adhitya.charan@blubridge.com>, Kiruthik Kanna M <kiruthik.kanna@blubridge.com>, Navin Kumar V <navin.kumar@blubridge.com>, Dinesh G <dinesh.g@blubridge.com>

Finished integrating customDNN with Navin's newest script.

Ran it and got loss saturating at around 6.8

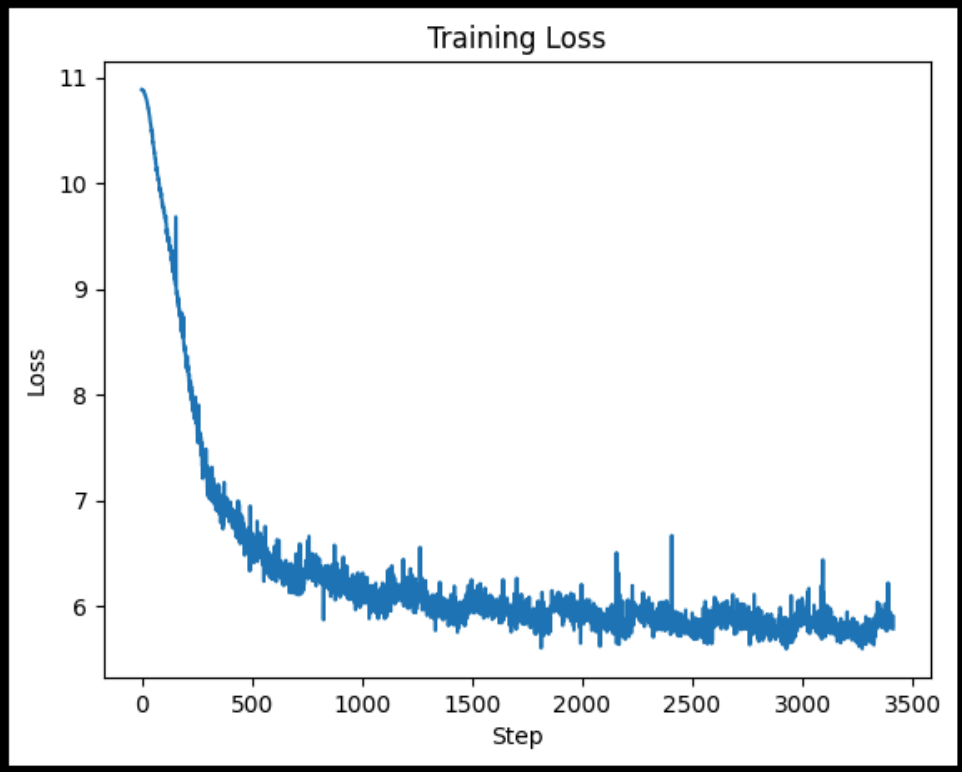
```
Maximum throughput:  44399.13818
Avg. Throughput: 42867.53100228163
Min Train Loss: 6.499729
Average loss:  7.1942130812557705
Max Grad Norm:  5.310605
Min Val Loss: 6.934966
```



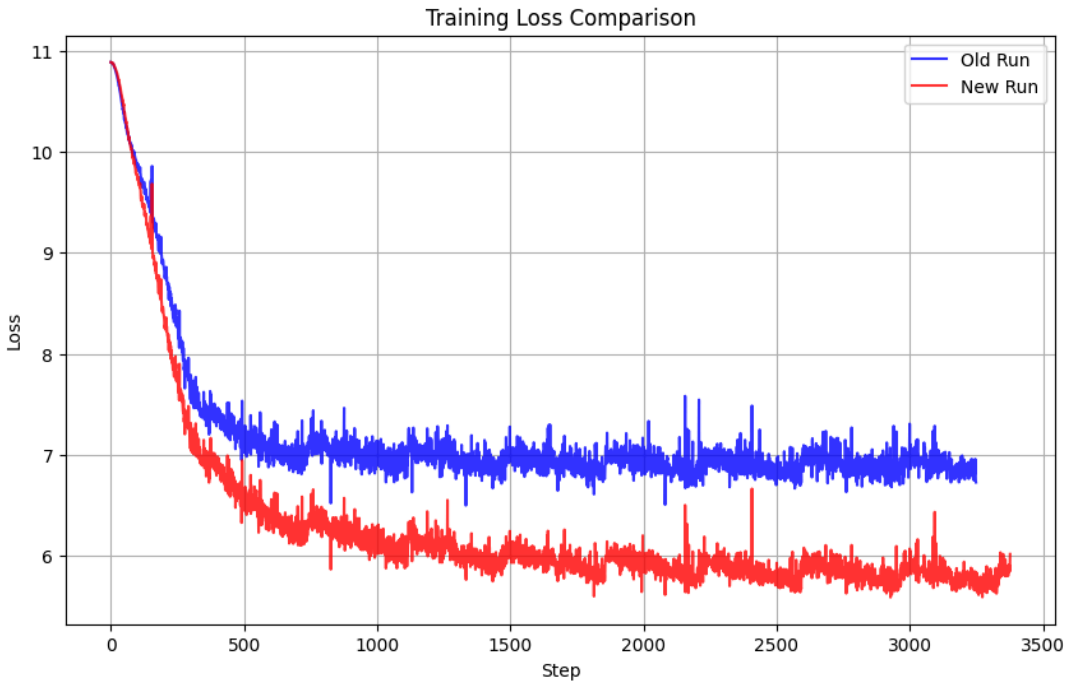
Pulled the latest master branch from Tensor-Implementations.

Getting even better loss now.

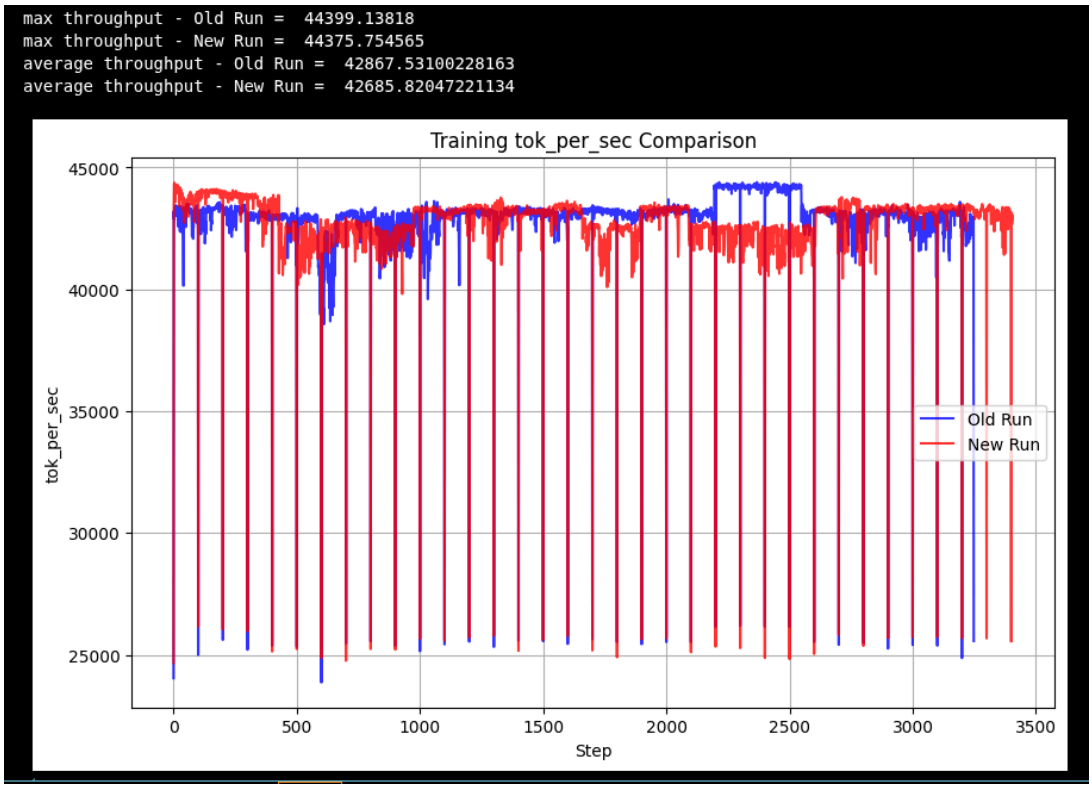
```
Maximum throughput:  44375.754565
Avg. Throughput: 42686.222829999126
Min Train Loss: 5.590434
Average loss:  6.29886922443598
Max Grad Norm:  2.894572
Min Val Loss: 5.826908
```



Now the loss is saturating at 5.8.



Compared to the old run, the newer run's loss was not saturating as early.



Although the throughput is kinda lower now.

Working on the throughput.

Also need to add a sync call after the embedding.

Regards,

Anuj Kumar
